Assignment 0206 Feedback

Proficiencies for *1a* and *1b* still only go as high as | in this assignment due to our still being in the early going with respect to these outcomes. The next assignments with these proficiencies will be expansive enough to merit a + maximum.

Miguel A. Vazquez

mvazque / mvazque93@gmail.com

1a — Great job with figuring out and issuing process/memory/file commands. (|)

1b — Looks safe to say that you can redirect I/O at will. (|)

1c — You connected to and worked with *my.cs.lmu.edu* and *screen*, respectively. Tunnel evidence could have used the actual command, but as noted I know that you did that anyway. (+)

3a — You generally found appropriate evidence for everything that was requested. There are some slight misses on the Linux side as stated in the inline feedback, but not so huge as to hit the proficiency. (+)

4d — Overall you handled information seeking and resource use quite well. (+)

4e — Commit frequency and messages are appropriate to the work done. (+)

4f — Submitted on time. (+)
